My Mission and My Attachment

Get ready for our Robot Design explanation to the judges.

Name: _____ **Date:** _____

> We are getting ready for our Robot Design presentation. The judges will want to know which missions we chose, how our attachments work, and what we did when something went wrong. Each of us explains **our own mission and attachment**. Use real examples from our robot. You don't have to fill every line.

Part 1 — My Mission and Attachment

Judges call this "mission strategy"

1. Which mission(s) does your attachment complete? Give the name and the points.

Hint: Look at the mission list. Write each mission number, its name, and how many points it is worth.

M _____ Name: _____ Points: _____

M _____ Name: _____ Points: _____

M _____ Name: _____ Points: _____

2. How many passive parts and active parts does your attachment have?

Hint: Passive = no motor (pushers, hooks, scoops). Active = uses a motor (lifts, turns, grabs).

Passive parts: ☐ **Active parts:** ☐

3. Describe your attachment. What does it look like and what does it do?

Hint: What pieces did you use? Which part touches the mission model?

_____

_____

_____

_____

4. Step by step, how does the robot do your mission?

Hint: Drive where? What does the attachment do? How does it come back? Use as many lines as you need.

Part 2 — Tell the Judges More Real stories are what judges remember

5. What is the most interesting thing about your attachment?

Hint: A clever piece? A problem it solves? Something that surprised you when it worked?

6. What was the trickiest part of your mission or attachment, and how did you figure it out?

Hint: Did the robot miss? Did a piece fall off? What did you change or who did you ask?
