My Script - Jasper

Date: _____

> This is **version 1** of our script. We will keep making it better as we go, but it is important to **practice now** so you know your part well.

Part 1 — Practice My Part

Communicate

Who knows best about ash trees?

We asked TRCA and contacted a company called TreeAzin, with questions about the EAB and the white ash tree. We asked the experts about curing ash trees. We discovered that the medicine only works if the tree has lost less than 30% of its leaves. When most of the leaves in the crown of a tree are gone, it is too late to save the tree. That is why finding the EAB early matters. We showed them that we had made ArborListen, and told them we could use the vibration sensor to detect the EAB. They told us that our idea is a good one.

Now, when you see a white ash tree, you will think of our speech and our solution. Thank you for listening!

Please practice your part out loud 3 times. Tick one box each time you practice.

Part 2 — Design My Foam Board

> Each team member will hold up a **foam board** to help with our Robot Design presentation. This week, think about what you want to put on yours, then **draw a design**. You don't have to write a lot. Bring your design to our next meeting.

Ideas for what could go on your foam board:

- My mission name and points
- A drawing of my attachment
- A photo of the robot
- What my attachment does
- A problem we fixed
- Your own idea

1. Draw your design for your foam board.

Hint: Pretend the box is your foam board. Where do the title, pictures and words go? Boxes and labels are enough.
