Jason - Design

Your part: Explain why we chose our solution and how we planned it.

Write 2-3 short bullet points per question in your own words. Use real team examples.

1. **Why did our team choose a vibration sensor after comparing the ideas on our decision matrix?**

   Think back: Which four ideas did we compare, and which questions did we ask about each one?

2. **How is the Tree Stethoscope planned to work, from the bark to the screen?**

   Think back: Where does the sensor tip go? What reads the signal? What does the screen show?

3. **What is one real tree or weather condition that influenced our design?**

   Think back: What did we measure at the park? What weather will the device face on a tree?
