Bowen - Create

Your part: Explain how the M5Stack, the piezo sensor, and the code make our prototype work.

Write 2-3 short bullet points per question in your own words. Use real team examples.

1. **How do the piezo vibration sensor and the M5Stack work together?**
   Think back: What does the piezo turn a vibration into? Why do we match the cable colours?

2. **What does the screen do when the sensor feels a vibration?**
   Think back: What did the screen show before and after we pressed the "Ready" button?

3. **What can you demonstrate with the wood to show what our prototype does today?**
   Think back: What happens on the screen if you scratch the wood? Is a scratch a real larva?
