Rossy - Identify

Your part: Explain the problem we chose and what our research helped us discover.

Write 2-3 short bullet points per question in your own words. Use real team examples.

1. **Why do Ontario's ash trees need help against the emerald ash borer (EAB)?**
   Think back: Where do the larvae chew, and what happens to the tree's "straws"?

2. **What did our tree tours and the expert emails teach us about how people check for EAB today?**
   Think back: Which clues do inspectors look for today, and how sick is the tree by then?

3. **Why is finding EAB early the real problem our team decided to solve?**
   Think back: How long can EAB hide before any sign shows? When does TreeAzin stop helping?
